PYTHON

Project Idea: Simple Chatbot using NLP

AIM:

Create a chatbot that responds to user messages using predefined replies.

OBJECTIVES:

- Learn basic NLP (Natural Language Processing).
- Work with string processing in Python.
- Create an interactive chatbot.

EXPECTED OUTPUT:

The chatbot should take user input and give relevant replies.

STEPS TO COMPLETE:

- Create a dictionary of possible responses.
- Use input() to take user messages.
- Process the input and search for matching keywords.
- Display an appropriate response.

SAMPLE OUTPUT (CONSOLE):

User: Hi

Bot: Hello! How can I help you?

User: What's your name? Bot: I'm a simple Python chatbot!
